WABO System

This system is based on the outside bets and looks at which bet is trending the most. I have done extensive research on trends in roulette and I have found the outside bets to be the best.

There are three outside bets:

1. Red/black
2. Odd/even
3. High/low

How to bet

- Write down the first 10 spins from a table, don't look at the board because they are not always right, rather stand and watch the spins.
- We will take the example of high / low numbers. Once you have 10 spins, have a look and see which one is trending better.
- Nine times out of ten you will find four low and six high numbers or visa- vera.
- Sometimes the pattern is different just remember only start betting once one of them are **two trends ahead** of the other after 10 spins, this is very, very, very important.

Example

18, 1, 25, 26, 13, 13, 31, 4, 16, 14

From here we can see that there are seven low (1-18) and three high (19-36) numbers.

We are now going to bet on the low numbers, but we must keep track of the trending at the same time as we bet. So when high is trending better we would change our bet to that side.

Betting sequence

- When you win stay on the same bet as before.
- When you lose increase bet by one unit and keep increasing until you win, once you win see if you are ahead or square, if you are, start betting from the beginning again.
- If you are down reduce bet by one unit, as soon as you win again increase by one unit, sort of like a sea-saw, keep doing this until you are square or up, once this happens start progression from the beginning.

When do you stop betting?

Once you are ahead by 7 to 10 units stop and go to another table or wait another 10 spins and start over. Try not to be too greedy. There is nothing wrong with making 50 to 100 units per day.

Bankroll:

I would say a 36-unit bankroll is safe enough.

Example of play

Here is an example taken from real spins from the Hamburg casino 2001 – 02 – 01:

18, 1, 25, 26, 13, 13, 31, 4, 16, 14

We know we are going to bet on low numbers because they are trending better, so we bet one unit:

- *1 unit bet on low, number 29 comes so we lose*

Now we have seven low and four high numbers

- *2 units bet on low numbers because low is still trending better than high, number 20 comes so we lose*

Now we have seven low and five high numbers

- *3 units bet on low numbers because low is still trending better than high, number 16 comes up so we win*

So far we are square, Now we have eight low and five high numbers. We start betting from the beginning again because we are square and not down.

- *1 unit on low numbers and number 7 comes so we win; now we are 1 unit up*

Now we have nine low and five high numbers

- *1 unit on low, number 5 comes so we win; now we are 2 units up*

Now we have ten low and five high

- *1 unit on low, number 31 comes so we lose*

Now we have ten low and six high numbers

- *2 units on low, number 28 comes up so we lose*

Now we have ten low and seven high…

I hope by now you get the picture. From here on I am going to show the rest in a short format as follows:

Number	Units bet	Win/loss	Balance
15	3	win	+2
21	1	lose	+1
13	2	win	+3
18	1	win	+4
4	1	win	+5
21	1	lose	+4
28	2	lose	+2
5	3	win	+5
18	1	win	+6
1	1	win	+7

Now is a good time to stop because we have reached our minimum target (+7).

We only played for 17 spins, this is about average. I recommend playing five to ten sessions a day.

I have tested this system on 15000 spins, which I think is quite extensive and I did not lose once.

I wish you luck and I hope you will give me 10% of your winnings every time you go to the casino. Please keep it totally to yourself and don't tell anyone, not even your dog because if you do maybe it will bring us bad luck and we would not want that.
