

# European Wheel: First & Last Line

As indicated, this bet plays the first or last line. In short, the numbers 0 and 1-6 are mates. The 0 and 31-36 are also mates. When you see any 3 DIFFERENT numbers from either of these sets appear within **7-8 spins**, bet the first OR last line respectively up to 21 bets. Numbers must all be different. No repeats. Don't play same line twice in a row. **Note: You don't play both lines at the same time. It's one or the other.**

*European Wheel Zero Bet:*

OR

**Example 1:**

**1** (win)

9

15

12

**1**

**4**

**0**

From bottom to top, the numbers 0-4-1 from the first line set of 0-1-2-3-4-5-6 have appeared together within 7 spins. You would bet the first line up to 21. It won on the 4<sup>th</sup> bet.

### Example 2:

36

7

20

14

13

6

22

11

10

19

34

15

27

9

31

0

Again, from bottom to top, the numbers 0-31-34 from the 0-31-32-33-34-35-36 set has appeared together within 7 spins. You play the last line (31-36) up to 21. In this example, the win came on the 10<sup>th</sup> bet.

**Note:** If the 0 ever comes up any time during your betting session, keep going. Finish the progression.

### Example 3: Taken from online casino

35 (win)

30

9

22

23

27

33

32

0

The numbers 0-32-33 have appeared together within 7 spins. The last line won on the 6<sup>th</sup> bet.

### Example 4: European Wheel

0  
6 (win)  
18  
23  
22  
27  
3  
20  
13  
1  
29  
30  
16  
6

The numbers 6-1-3 have appeared within 8 spins indicating a first line bet, which wins on the 5<sup>th</sup> spin.

**Important Rule:** Make sure your bet hasn't already hit before wagering. Already hit means that before you place the wager make sure it hasn't already "hit," or won, in the series of numbers. Do this by making sure the numbers you are playing have not shown 4 or more times in the last 10 numbers. If they have, do not bet. For example, a First & Last Line that has already hit looks like this (read top to bottom):

*Example 1:*

6	
	23
13	0
	0
	25
	18
24	0
	12
2	

*Example 2:*

	1
	34
22	12
2	34
2	0

These bets have already hit because winning numbers are showing 4 times within the last 10 spins. If you ever see scenarios like this, skip it and do not bet. Again, don't play if it has hit 4 times in the last 10 spins. Three is okay, four is not.

**Note:** This bet works online but if you plan to test in real money mode, due to the way RNG software works, make sure you have not played lines in the last 6 sessions AND keep sessions within 15 minutes or less. Also, after you use this bet to win in a session, you can't use it again for the next 5 sessions! A session ends when the software is exited for at least 20 minutes, not if you re-start the numbers. NEVER play at Flash casinos. The numbers do run the same way when playing for fun because software only reacts when playing for real money, so you can verify that this bet works in fun mode. When playing for real money, how you play will have to change but I can't go into full details in this short document. Of course, live play does not have these restrictions.

**Line Progression:**

*17 Bets:* 1111 2222 444 888 10 12 15 (85 units)

*21 Bets:* 1111 2222 444 888 10 12 15 17 21 25 30 (178 units)

To reduce bankroll, skip first 4 spins, then play using 17 bet progression.

## Bonus Free Bet:

Here is an outside bet pattern that occurs frequently. It plays Red or Black. When you see the pattern BBRB bet on Red. When you see RRBR bet on Black. Ignore zeros in the sequence. Progression is 5 bets. It wins 98-99 out of 100 sessions. That equals \$140-\$340 profit per 100 sessions using \$5 chips. Works on BOTH wheels.

### Example 1:

6	
26	
15	
22	
6	
28	
	9
28	
	21
17	
	3
10	

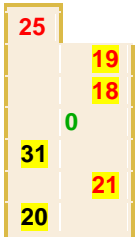

Highlighted in yellow, reading from top to bottom, this example shows the BBRB pattern winning on Red (#21).

### Example 2:

	25
	34
--	--
35	
	12
31	
	21
	5
4	
4	
	1
8	
24	
31	
	19
35	
11	
	30
8	
	32

Reading from top to bottom, this example shows RRBR winning on Black (#31). Highlighted in green is a BBRB pattern winning 2 spins later on Red (#30).

### Example 3:

This example demonstrates ignoring the zero in a sequence. The zero interrupts a RRBR pattern but still wins on Black (#20).

### Red/Black Progression:

1-2-4-8-16

31 units

**Testing Fast:** You can go to the [Spielbank website](http://www.spielbank.com) of real European wheel spins to see how these “patterns” win.

There are 7 other similar bets. You can see videos of these in action at my YouTube channel: <http://www.youtube.com/user/lashawn2003>

**Note:** These are NOT any of the pattern bets included in the system. These are free bets.

Be blessed,  
Carrie
